                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

Read. Sci. U.S.A. 99:16899-16903(2002).

C. Natl. Read. Sci. U.S.A. 99:16899-16903(2002).

FUNCTION: Mediates GPI anchoring in the endoplasmic reticulum, by replacing a protein's C-terminal GPI attachment signal peptide with a pre-assembled GPI. During this transamidation reaction, the GPI transamidase forms a carbonyl intermediate with the substrate
                                                                                                                                                                                                                                                  6050

"BAK1, an Arabidopsis LRR receptor-like protein kinase, interacts with BRII and modulates brassinosteroid signaling.";

Cell 110:213-22(2002).

-1- FUNCTION: Receptor with a serine/threonine-protein kinase activity. Regulates, in response to brassinosteroid binding, a signaling cascade involved in plant development, including expression of light- and stress-regulated genes, promotion of cell elongation, normal leaf and chloroplast senescence, and flowering. Binds brassinolide, and less effectively castasterone, but not 1,3/22,3-0-textramethylbrassinolide or ecdysone. May be involved in a feedback regulation of brassinosteroid biosynthesis.

--- CATALTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.

--- SUBUNIT: Heterodimer with BAK1.

--- SUBURIT: Heterodimer with BAK1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STÉROID BINDING.

MISCELLANEOUS: Binding of brassinosteroid induces intramolecular autophosphorylation of BRII. Interaction with BAKI activates both receptor kinases and the full activation of either receptor kinases requires transphosphorylation by their partners. Optimum in vitro phosphorylation of the substrate requires Arg or Lys residues at P-3, P-4, and P+5 (relative to the phosphorylated amino acid at

"Generation and initial analysis of more than 15,000 full-length
A human and mouse cDNA sequences."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isogai T., Ota T., Hayashi K., Sugiyama T., Otsuki T., Suzuki Y., Nishikawa T., Nagai K., Sugano S., Shiratori A., Sudo H., Wagatsuma M., Hosoiri T., Kaku Y., Kodaira H., Kondo H., Sugawara M., Takahashi M., Chiba Y., Ishida S., Murakawa K., Ono Y., Takiguchi S., Watanabe S., Kimura K., Murakami K., Ishii S., Kawai Y., Saito K., Yamamoto J., Wakamatsu A., Nakamura Y., Nagahari K., Masuho Y., Ninomiya K., Iwayanagi T., "NEDO human cDNA sequencing project.", "NEDO human cDNA sequencing project.", "NEDO human cDNA sequencing project.", submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.

Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.

-I- FUNCTION: Binds to Fractin. May be involved in regulation of the actin cytoskeleton (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

RT "Cloning and expression of the Rb-related mouse pl30 mRNA.";

CC "I- FUNCTION: MAY HAVE A FUNCTION IN CELL CYCLE REGULATION. BINDS TO CC AND MAY BE INVOLVED IN THE TRANSFORMING CAPACITY OF THE ADENOVIRUS CC E1A PROTEIN. MAY ACT AS A TUMOR SUPPRESSOR. POTENT INHIBITOR OF CC E2F-MEDIATED TRANS-ACTIVATION, ASSOCIATES. PREFERENTIALLY WITH CC E2F-MEDIATED TRANS-CCITVATION, ASSOCIATES. PREFERENTIALLY WITH CC E2F5. BINDS TO CYCLINS A AND E (BY SIMILARITY).

CC -1- SUBCELLULAR LOCATION: Nuclear.

CC -1- SUBCELLULAR LOCATION: Nuclear.

CC -1- PTM: Phosphorylation on Ser-669 in G1 leads to its ubiquitin-

Ammendent proteolysis (By similarity).
